## Liberty

All handicap people, can not have a free time during night, in order to sleep they need assistances.

Since they are unable to turn they have several problems such as blood circulation, decubitors, sleep disorders, muscular pain and more.

Liberty is a unique system that give the possibility to the user to move indipendently and automatically as they want. For the first time, the handicap get in controll of him self during night!

Liberty can be installed to every bed and it has a custom made remote control for each different desease.

Liberty mimics every needed body's natural movement, giving the opportunity to make repetitive motions such as phisiotherapy exercises.

Liberty improve life quality of the patient and the family, and reduce fixed costs such as night caregivers and others.
