A NEW PERSPECTIVE ON WIND ENERGY GENERATION

VISION

Altitude winds could provide renewable energy at the cost required to solve the conflict between economy and ecology

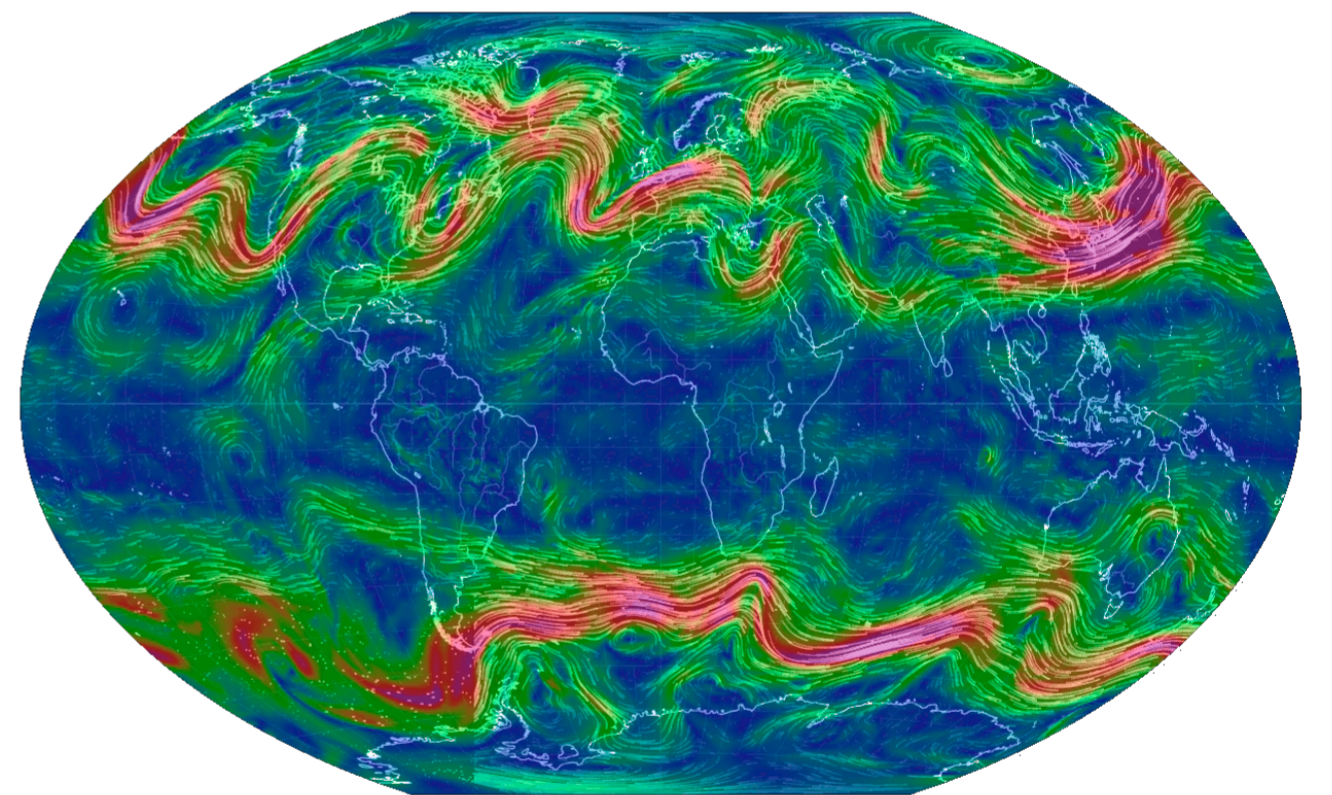

MISSION

Skypull proposes an efficient and cost effective solution, making a step beyond the present wind exploitation systems

THERE IS HUGE POWER UP THERE!

Let's reach the altitude winds and gather their immense energy through the Skypull technology...
Wind turbines can gather only a negligible part of the wind energy. Their dimensions and weight make them dependent on local wind conditions, logistics, public incentives...

Skypull is able to make a step forward... and upward!
